On the Subject of Stable Time Signatures

Not quite my tempo.

- This module looks identical to Time Signatures (https://ktane.timwi.de/HTML/Time%20Signatures.html), but there are a couple of functional differences.
- The module will not reset the time signatures upon listening to it again.
- The module will not reset input upon listening to it again.
- There are only three time signatures.
- Solve the module as you would if this were standard Time Signatures: input all of the time signatures given.
